

Going Green

Sustainable Urban Precincts Project

We are upgrading 90 buildings across 3 campuses to slash energy and water use, the largest project of its kind in the southern hemisphere.

A total reduction of
239
million kWh
in electricity consumption

Upgrading
26,000
light fittings

Funding
\$4.8
million
in sustainable
teaching
and research

It would take Australia's
23
million population

54 hours
of non-stop bike riding

to generate the
same amount of
electricity savings

That's enough electricity to power
7,000
houses

for **6** years

or power the Melbourne
Metro train network for
7 months

An annual reduction of
30,000
tonnes CO₂e

enough to fill
6,000
hot air balloons

equivalent to planting
an area the size of
Melbourne CBD with
128,000
trees each year

We're replacing
2,000
fixtures

saving
68
million litres per year

equivalent to
425
million cups of coffee

That's
50%
of Australia's annual
coffee consumption
